ITEM	COH Use
**Executive Summary	
<p>1. Provide a legal description of the boundaries of the designated property, including metes and bounds, and a copy of the deed for the property. <u>A professional surveyor currently registered with the Texas Board of Professional Surveying must certify that all property descriptions with metes and bounds are accurate.</u></p> <p style="text-align: center;"><u>Label "Appendix A"</u></p>	
<p>2. A description of the current use, and, to the extent know, the anticipated use(s), of the designated property and properties within 500 feet of the boundary of the designated property.</p> <p style="text-align: center;"><u>Label "Appendix B"</u></p>	
<p>3. A site map showing.</p> <ol style="list-style-type: none"> The location of the designated property. The topography of the designated property as indicated on publicly available sources, which must note the watershed <u>including the nearest surface water body</u> and whether the designated property is located in a floodplain or floodway, as those terms are defined in Chapter 19 of the Code of Ordinances. The detected area of groundwater contamination. The location of all soil sampling locations and all groundwater monitoring wells. Groundwater gradients, to the extent known, and direction of groundwater flow. The ingestion protective concentration level exceedence zone for each contaminate of concern, to the extent known. Depth to groundwater for each affected zone. <p style="text-align: center;"><u>Label "Appendix C"</u></p>	
<p>4. Provide for each contaminant of concern within the designated groundwater:</p> <ol style="list-style-type: none"> A description of the ingestion protective concentration level exceedence zone and the non-ingestion protective concentration level exceedence zone, including a specification of the horizontal area and the minimum and maximum depth below ground surface. The level of contamination, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L units. Its basic geochemical properties (e.g., whether the contaminant of concern migrates with groundwater, floats or is soluble in water). <p style="text-align: center;"><u>Label "Appendix D"</u></p>	
<p>5. A table displaying the following information for each contaminant of concern, to the extent known:</p> <ol style="list-style-type: none"> The maximum concentration level for soil and groundwater, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L units. The critical protective concentration level without the municipal setting designation, highlighting any exceedences. <p style="text-align: center;"><u>Label "Appendix E"</u></p>	

ITEM	COH Use Only
<p>6. If the plume extends beyond the limits of property owners listed in this application, list the owners of the additional property beneath which the plume(s) extend(s), and a summary of interactions with those property owners about the plume(s) and this MSD application. Please Note: You are not required under this item to notify affected property owners, only to provide a summary or who affected property owners are, and if there have been any communications. "No contact" can be an acceptable answer.</p> <p style="text-align: center;"><u>Label "Appendix F"</u></p>	
<p>7. A statement as to whether the plume of contamination is stable (i.e. no change), or contracting, and delineated, <u>with the basis for that statement</u>. Please include historical sampling data.</p> <p style="text-align: center;"><u>Label "Appendix G"</u></p>	
<p>8. A statement as to whether contamination on and off the designated property <u>without</u> a Municipal Setting Designation <u>will exceed</u> a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.</p> <p style="text-align: center;"><u>Label "Appendix H"</u></p>	
<p>9. A statement as to whether contamination on and off the designated property <u>with</u> a Municipal Setting Designation <u>will exceed</u> a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.</p> <p style="text-align: center;"><u>Label "Appendix I"</u></p>	
<p>10. Identification of the points of origin of the contamination, to the extent known.</p> <p style="padding-left: 40px;">a. Please list the Potentially Responsible Party (PRP), if unknown, state unknown. (applications without the PRP listed will be deemed incomplete)</p> <p style="text-align: center;"><u>Label "Appendix J"</u></p>	
<p>11. Environmental regulatory actions, litigation, and plume identification.</p> <p style="padding-left: 40px;">a. A description of any environmental regulatory actions that have been taken within the past five years in connection with the designated property, to the extent known.</p> <p style="padding-left: 40px;">b. A description of any litigation that has taken place within the past five years in connection with the designated property, to the extent known.</p> <p style="padding-left: 40px;">c. A statement as to whether there are any other remediation activities by the applicant, or any other party or agency, which are not listed in the application.</p> <p style="padding-left: 40px;">d. A statement as to which contamination plume and groundwater zone the applicant is including in the MSD.</p> <p style="text-align: center;"><u>Label "Appendix K"</u></p>	
<p>12. A listing of all existing state or EPA registrations, permits, and identification numbers that applies to the designated property.</p> <p style="text-align: center;"><u>Label "Appendix L"</u></p>	

ITEM	COH Use Only
<p>13. Provide evidence that the designated property has been admitted to the Texas Voluntary Cleanup Program or similar state or federal programs, (the program application number is sufficient evidence) and a description of the status of the designated property in the program. Also, include the state or federal cleanup project manager's name.</p> <p><u>Label "Appendix M"</u></p>	
<p>14. A summary of any environmental site assessment reports filed with TCEQ regarding any site investigations or response actions that are planned, ongoing or completed related to the designated property.</p> <p><u>Label "Appendix N"</u></p>	
<p>15. A statement as to whether any public drinking water supply system exists that satisfies the requirements of Chapter 341 of the Texas Health and Safety Code and that supplies or is capable of supplying drinking water to the designated property and property within one-half mile of the designated property and the identity of each supply system.</p> <p><u>Label "Appendix O"</u></p>	
<p>16. The name and address of each owner or operator of a water well registered or permitted by the state or the Houston-Galveston Subsidence District that is located within five miles of the boundary of the designated property, along with a map showing the location of each well and, to the extent known, a notation of whether each well is used for potable water. Well logs <u>must</u> be included in the electronic copy of the application, but should not be included in the hard copies. (An accompanying electronic excel file with mailing information should be included with your application.)</p> <p><u>Label "Appendix P"</u></p>	
<p>17. The name and address of each retail public utility, as defined in section 13.002 of the Texas Water Code that owns or operates a groundwater supply well within five miles of the boundary of the designated property.</p> <p><u>Label "Appendix Q"</u></p>	
<p>18. A listing of each municipality, other than the city of Houston, with a corporate limit within one-half mile of the boundary of the designated property.</p> <p><u>Label "Appendix R"</u></p>	
<p>19. A listing of each municipality, other than the city of Houston, that owns or operates a groundwater supply well within five miles of the boundary of the designated property.</p> <p><u>Label "Appendix S"</u></p>	
<p>20. A listing of owners of real property within 2,500 ft. of the boundary of the designated property as indicated by the most recent appraisal district records. Please Note: This requirement may include real property outside the City of Houston. Be sure to include <u>ALL</u> properties in the 2,500 ft. boundary. (An accompanying electronic excel file with mailing information should be included with your application.)</p> <p><u>Label "Appendix T"</u></p>	

ITEM	COH Use Only
<p>21. Form U-2012-01 signed and sealed by a licensed professional engineer or licensed professional geoscientist authorized to practice in the State of Texas with expertise in environmental remediation. (Form U-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage.)</p> <p style="text-align: center;"><u>Label "Appendix U"</u></p>	
<p>22. If the licensed professional engineer or licensed professional geoscientist determines that contaminants of concern from sources on the designated property are migrating from or through the designated property more likely than not do exceed a non-ingestion protective concentration level on property beyond the boundary of the designated property, then the applicant must:</p> <ol style="list-style-type: none"> Specify the name and address of the owner of each property. Send a copy of the application to the owner of the property with the notice of the public meeting. Provide documentation that the designated property has been included in a state or federal program that requires that the entire non-ingestion protective concentration level exceedance zone be addressed to the satisfaction of the agency administering the program, along with documentation of the estimated time period in which it is to be addressed. An example of such a program is the Texas Voluntary Cleanup Program (section 361.501 of the Texas Health and Safety Code, as may be amended from time to time). Provide documentation upon completion of the state or federal program showing that the non-ingestion protective concentration level exceedances have been addressed to the satisfaction of the agency administering the program. <p style="text-align: center;"><u>Label "Appendix V"</u></p>	
<p>23. Form W-2012-01 certified/signed by the applicant and any authorized representatives of the applicant(s) listed in the application. (Form W-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage.)</p> <p style="text-align: center;"><u>Label "Appendix W"</u></p>	
<p>24. Form X-2012-01 signed by the property owner or authorized agent (if an authorized agent, you must provide the legal authorization instrument). (Form W-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage.)</p> <p style="text-align: center;"><u>Label "Appendix X"</u></p>	
<p>25. A CD (or other devise) containing the pdf file of the application, Excel spreadsheet of water well owners and property owners for mailing notices, and the pdf file of the well log report.</p> <p style="text-align: center;"><u>Label "Appendix Y"</u></p>

ENGINEERING
PLANNING &
DEVELOPMENT
DIVISION**

EXECUTIVE SUMMARY

The designated Municipal Setting Designation (MSD) property is the Carmax Auto Superstore, Inc. (Carmax) located at 6909 Southwest Freeway in Houston, Harris County, Texas (Figure C1). The site is bounded by Bintliff Street on the west, the Southwest Freeway (Interstate Highway 59) on the north, Hornwood Street on the east, and a mosque and residential development on the south. In May 1997, a Carmax Auto Superstore was constructed on the site which is used for the retail sale of pre-owned cars. The site has been improved with two buildings: the main building and a carwash building. The western portion of the main building is used as a show room and office space. The eastern portion of the main building is the service department. Minor auto maintenance and repair activities associated with preparing the automobiles for sale are performed onsite.

The site is located in a predominately commercially developed area within the municipal boundaries of the City of Houston (COH) which has been commercially developed since at least the 1960s (Figure B1). Currently, the land use of the surrounding area within 500 feet of the site include offices and commercial businesses to the east across Hornwood, west across Bintliff, and north across Southwest Freeway and residential development and a mosque to the south.

The site is located within the Brays Bayou watershed (Figure C3). According to the Flood Insurance Rate Map, the site is located outside the 100-year floodplain (Figure C2).

Volatile organic compound (VOC) Protective Concentration Level Exceedence (PCLE) Zones were identified on the designated MSD property. The VOC PCLE Zones are shown on Figure C7.

Site and Surrounding Area Land Use History

The former Halliburton Geophysical Services (Halliburton) facility onsite operations consisted of manufacturing and assembling geophysical tools and equipment between 1961 and 1994. The former Halliburton Geophysical Service facility is considered the historical source of onsite

contamination. The facility contained 98,000 square feet of buildings (five buildings) situated on 206,000 square feet of land. Buildings D and E located near the south side of the site contained a paint area, plating shop and vehicle maintenance shop. Hazardous waste and petroleum oil storage sheds were located near Buildings D and E. Wastes known to have been generated at the site when Halliburton was in operation included paint, paint related wastes, toluene, chromic and other acids, petroleum dispersants, solvents, and waste oil. Several historic USTs were located onsite near Buildings D and E. The potential onsite sources of impact were removed over 15 years ago when Halliburton vacated the site. Figures C5 and J1 show the historical land use of the site and surrounding area.

The primary offsite source of potential environmental concern identified is the former Target Tune & Lube (Target) auto service center located at 7051 Southwest Freeway. The former Target was located approximately 300 feet west of the property across Bintliff Street and operated between 1969 and approximately 2006. A petroleum hydrocarbon and chlorinated VOC release to soil and groundwater was discovered during an investigation around the former UST system and the site was closed by the TCEQ PST Program under construction worker criteria. The offsite former Target property entered into the Voluntary Cleanup Program (VCP) (VCP No. 2072) in 2009 and a VCP Certificate of Completion was issued in 2010 based on the PST closure under 30 TAC 334 Rules.

Site Sensitive Receptor Survey

No surface water bodies or sensitive receptors were identified within 0.25-mile of the designated MSD site. No domestic drinking water wells are present on the site or within 0.5-mile of the site. Three City of Houston municipal water wells located approximately 1,200 feet south of the affected property do not produce from the affected shallow groundwater-bearing unit and are not threatened by the onsite release since the production zones are greater than 800 feet below ground surface (bgs).

Site Assessment

The primary objectives of the site assessment were to investigate the soil and groundwater at the site, identify the chemicals of concern (COCs), and define the soil and groundwater COC Protective Concentration Limit Exceedance (PCLE) zones as part of the process to obtain closure under Texas Risk Reduction Rules (TRRP) Texas Administration Code (TAC) 30 §350 through the TCEQ VCP.

Site investigations were performed onsite in the identified areas of concern and onsite and offsite groundwater plumes delineated between August 1994 and May 2008. Groundwater sampling events were performed between June 1998 through June 2012. The site investigations consisted of advancing numerous soil borings and installing groundwater monitoring wells onsite in the identified areas of concern and offsite in the Bintliff Drive City of

Houston (COH) right-of-way (ROW) and on the former Target property. A total of 16 shallow soil borings and 23 deep soil borings were advanced on the site and on offsite properties. The deep soil borings were converted to permanent monitoring wells (Figure C5). The soil samples and groundwater samples collected from the onsite soil borings and monitoring wells were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs) and/or the 8-listed Resource Conservation and Recovery Act (RCRA) metals. The soil and groundwater samples collected from the offsite soil borings and monitoring wells were analyzed for VOCs.

Investigation Findings and Conclusions

- Based on concentration trends, three groundwater plumes were identified: two onsite plumes (eastern and western) and an off-site plume beneath the Bintliff Drive ROW. The COCs identified in the groundwater plumes that exceed the applicable groundwater ingestion ($^{GW}GW_{Ing}$) PCLs are trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), and vinyl chloride (VC). The COCs that exceed $^{GW}GW_{Ing}$ PCLs in the plumes consist of 1,1-DCE and VC in the onsite eastern plume; 1,1-DCE, TCE, and VC in the onsite western plume; and, 1,1-DCE, TCE, and VC in the offsite plume.
- The primary source for the COCs (TCE, 1,1-DCE, and VC) in the groundwater plumes appears to be historical onsite Halliburton operations between 1961 and 1994. The onsite historical sources were removed approximately 15 years ago. Further discussion of the onsite sources is provided in Appendix J.
- TPH and metals were not detected in the soil and shallow groundwater at concentrations exceeding TCEQ residential ingestion PCLs. VOCs were not detected in the soil at concentrations exceeding TCEQ residential ingestion PCLs.
- The affected groundwater in the plumes has been delineated horizontally and vertically to TCEQ residential ingestion PCLs (Figure C4-1). The PCLE Zones for the groundwater COCs are vertically confined to the shallow groundwater zone encountered between approximately 14 feet and 55 feet bgs.
- The COC concentrations in the shallow groundwater have not exceeded TCEQ non-ingestion PCLs during 14 years of groundwater monitoring.
- The groundwater plumes have been monitored for 14 years and are stable or decreasing in size and concentration. The COC concentrations are decreasing through dechlorination (Graphs G1 to G7 in Appendix G).

APPENDIX A - LEGAL PROPERTY DESCRIPTION

Provide a legal description of the boundaries of the designated property, including metes and bounds, and a copy of the deed for the property.

A legal description of the boundaries of the designated property and a copy of the deed for the property are included in Appendix A. The metes and bounds description is included as Exhibit A to the deed.

KNOW ALL MEN BY THESE PRESENTS:

That **HALLIBURTON ENERGY SERVICES, INC. FORMERLY KNOWN AS HALLIBURTON COMPANY**, a Delaware corporation, Grantor, in consideration of the sum of Ten and No/100 Dollars (\$10.00) and other good and valuable considerations, to it paid, the receipt of which is hereby acknowledged, does hereby grant, bargain, sell and convey unto **CARMAX AUTO SUPERSTORES, INC.** a Virginia Corporation, Grantee, the following described real property and improvements thereon situated in **HARRIS COUNTY, TEXAS**, to wit:

All right, title and interest in and to a tract of land described as follows:

Block Twenty-One (21), of Sharpstown Industrial Park, Section Eight (8), an addition in Harris County, Texas, according to the map or plat thereof, recorded in Volume 67, Page 42, of the Map Records of Harris County, Texas.

This deed is given and Grantee accepts same subject to 1997 general real estate taxes not yet due or payable, which taxes shall be prorated between Grantor and Grantee as of the date of closing, which proration shall be based upon the latest assessments or actual invoices available. Should any such proration be inaccurate based upon the actual tax bill or assessment when received, either party may demand and shall be entitled to receive a payment correcting any such misapportionment, and is further subject to mineral reservations retained by prior grantors in deeds of record, and to any and all valid and subsisting covenants, conditions, restrictions, reservations and easements of record.

TO HAVE AND TO HOLD the property, together with all and singular the rights and appurtenances thereto in anywise belonging unto the Grantee, its legal representatives, successors, and assigns, forever; and Grantor does hereby bind itself and its legal representatives, successors, and assigns, to **WARRANT AND FOREVER DEFEND** all and singular the Property unto Grantee, its legal representatives, successors, and assigns, against every person whomsoever lawfully claiming or to claim the same or any part thereof, by, through or under Grantor, but not otherwise. The Property is hereby conveyed in its strict "as is, where is" condition, without representation or warranty of any kind, except for any express written representations or warranties made by Grantor to Grantee, and except as to title as expressly set forth herein.

IN WITNESS WHEREOF, the said first party hereto has caused these presents to be signed in its name and by its Attorney-in-Fact and its corporate seal affixed this 11th day of MAY, 1997.

APPENDIX B – PROPERTY USE

A description of the current use, and, to the extent know, the anticipated use(s), of the designated property and properties within 500 feet of the boundary of the designated property.

The designated MSD property (site) is the Carmax Auto Superstore, Inc. located at 6909 Southwest Freeway in Houston, Harris County, Texas. The site is bounded by Bintliff Street on the west, the Southwest Freeway (Interstate Highway 59) on the north, Hornwood Street on the east, and a mosque and residential development on the south. In May 1997, a Carmax Auto Superstore was constructed on the site which is used for the retail sale of pre-owned cars. Minor auto maintenance and repair activities associated with preparing the automobiles for sale are performed onsite.

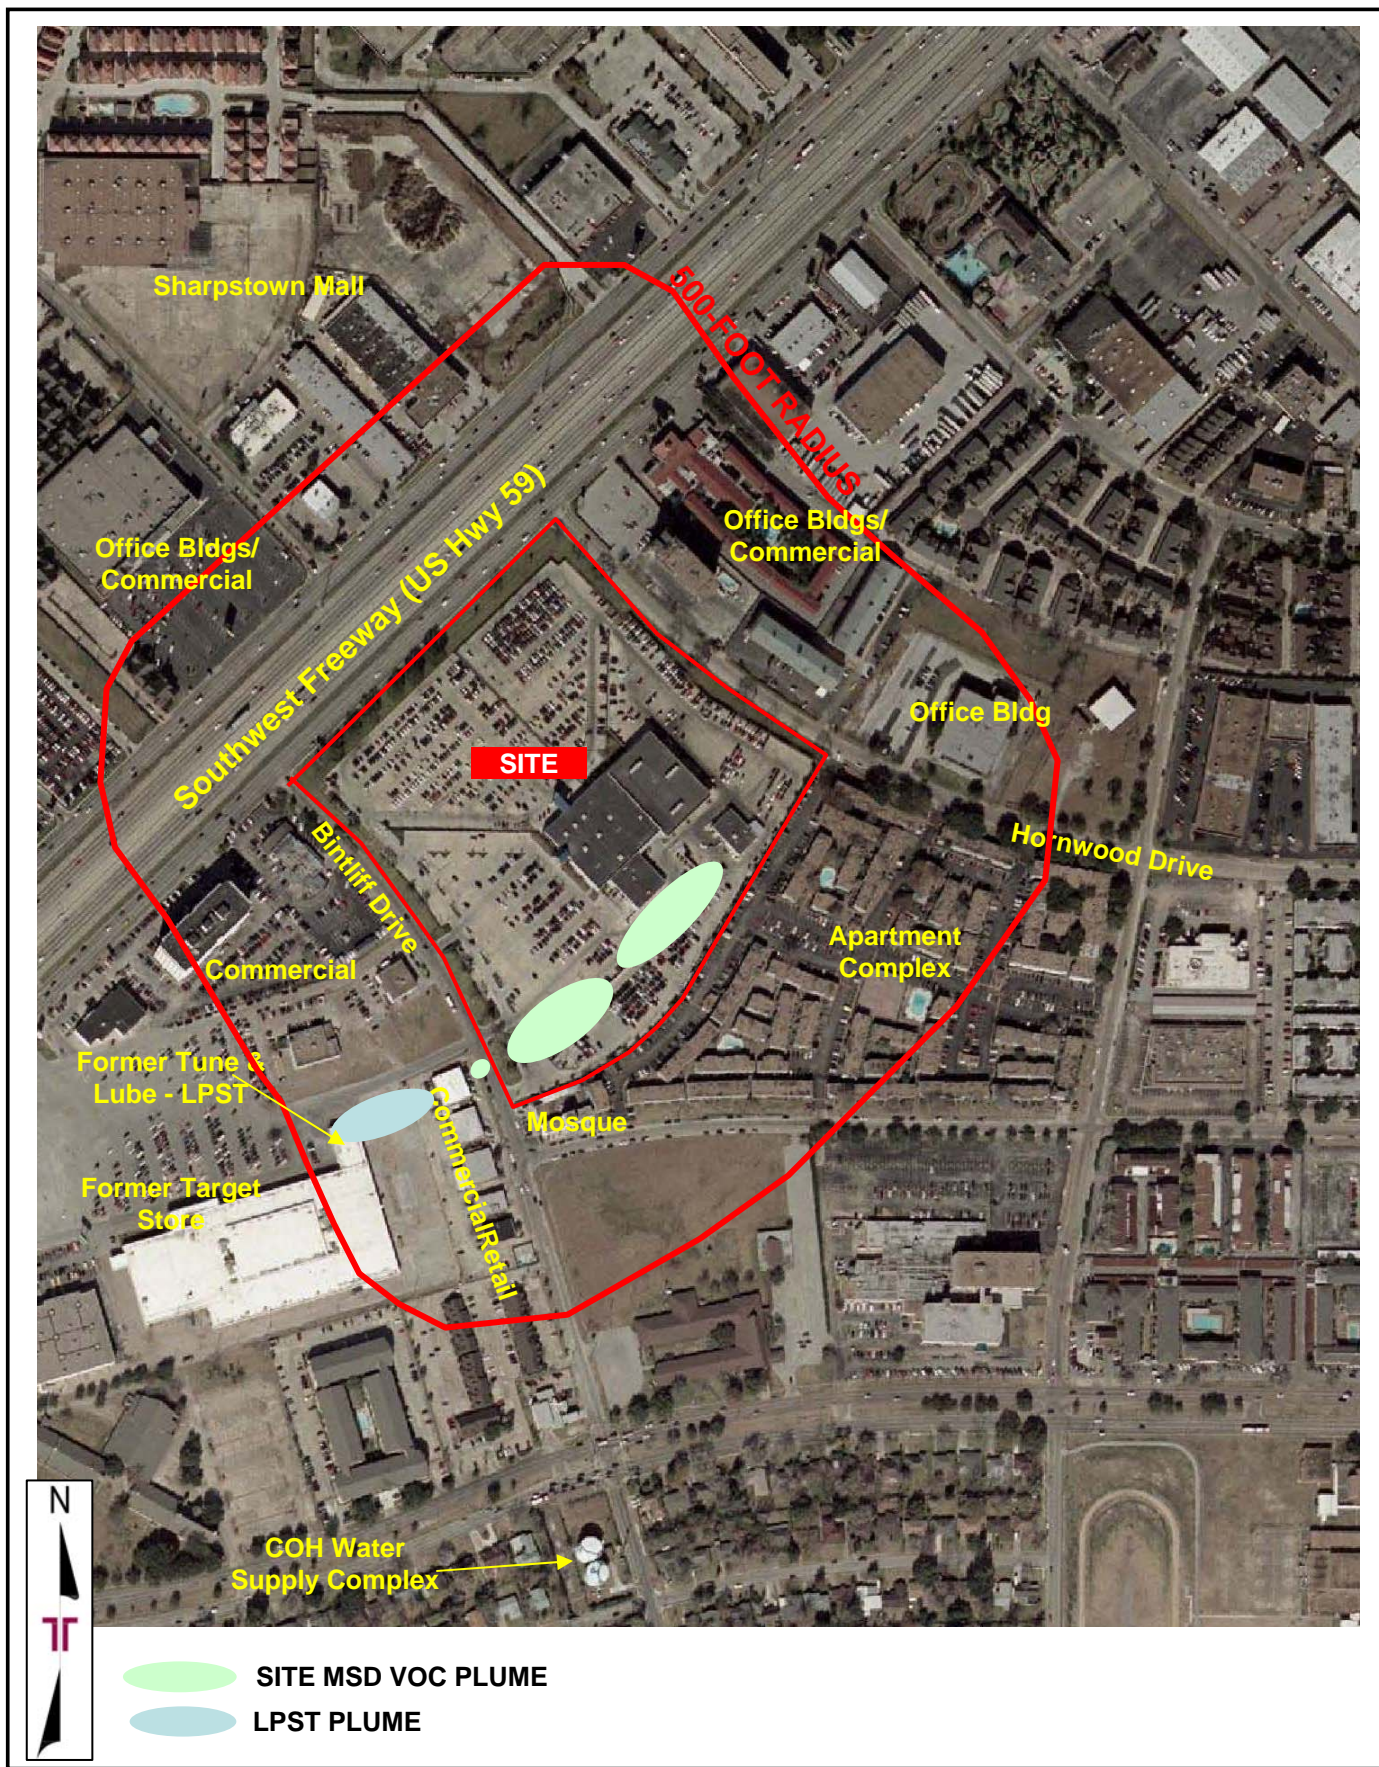

The site has been improved with two buildings: the main building and a carwash building. The western portion of the main building is used as a show room and office space. The eastern portion of the main building is the service department. The buildings occupy approximately 35 percent of the property. The remaining 65 percent of the site consists of parking areas and landscaping.

Surrounding Area

The site and surrounding area are predominately commercially developed and have been commercially developed since at least the 1960s. Currently, the land use of the surrounding area within 500 feet of the site include offices and commercial businesses to the east across Hornwood, west across Bintliff, and north across Southwest Freeway and residential development and a mosque to the south. Figure B1 shows the site and the surrounding land use within 500 feet of the site.

A Target Tune & Lube (Target) center (LPST No. 115555) was formerly located approximately 300 feet west of the property across Bintliff and operated between 1969 and the late 1990s. A release to soil and groundwater was discovered during an investigation around the former UST system and the site was closed by the TCEQ under construction worker criteria. The former Target property entered into the Voluntary Cleanup Program (VCP) (VCP No. 2072) in 2009 and a VCP Certificate of Completion was issued in 2010.

The land use of the site and nearby properties is not expected to change in the near future.

APPENDIX C – SITE MAPS

A site map showing.

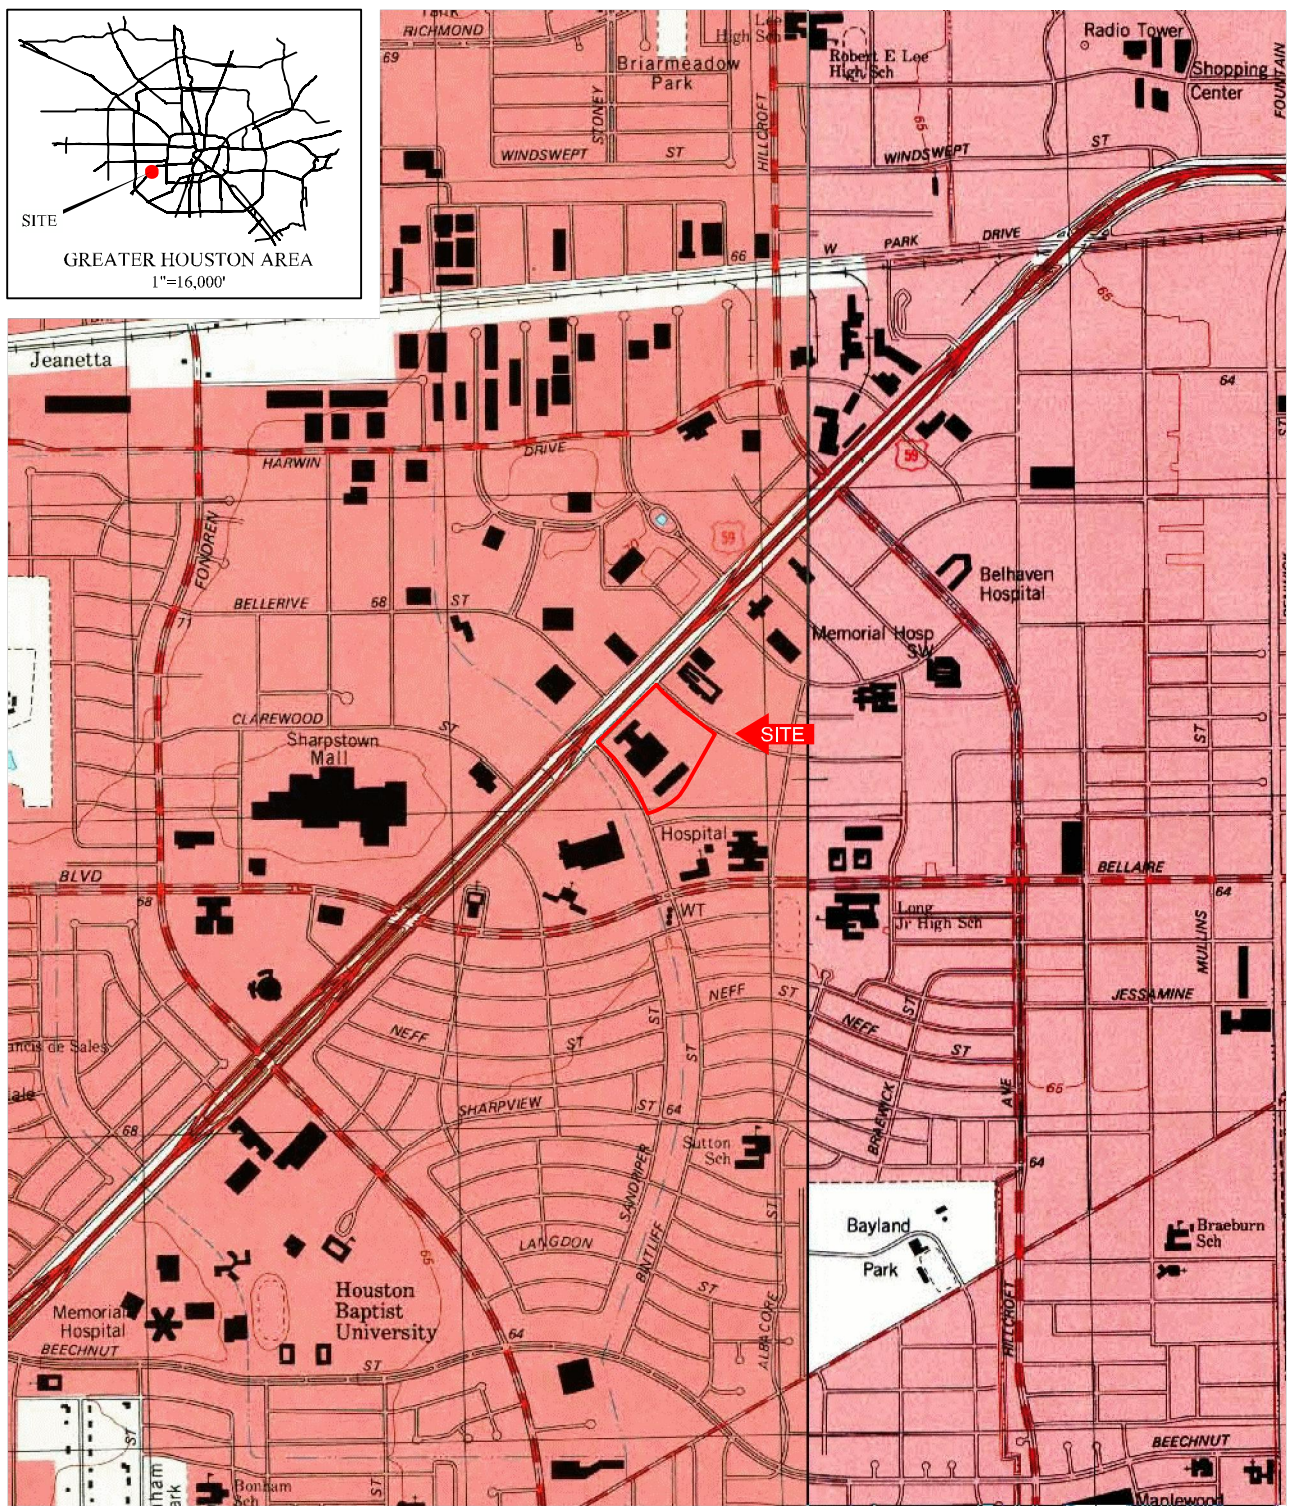

- a. The location of the designated property.*
- b. The topography of the designated property as indicated on publicly available sources, which must note the watershed, including the nearest surface water body, and whether the designated property is located in a floodplain or floodway, as those terms are defined in Chapter 19 of the Code of Ordinances.*
- c. The detected area of groundwater contamination.*
- d. The location of all soil sampling locations and all groundwater monitoring wells.*
- e. Groundwater gradients, to the extent known, and direction of groundwater flow.*
- f. The ingestion protective concentration level exceedence zone for each contaminate of concern, to the extent known.*
- g. Depth to groundwater for each affected zone*

The figures in this section provide information required under Appendix C. The site maps depict the property location and topography, the area of groundwater contamination, the location of all soil sampling points and groundwater monitoring wells, the groundwater gradient, the groundwater ingestion PCL exceedence (PCLE) zones, and the depth to groundwater for each affected zone.

The following is a list of figures included in Appendix C:

- Figure C1 – Site Location (shown on a topographic map)
- Figure C2 – Flood Plain Map
- Figure C3 – Watershed Map
- Figure C4-1 – Detected Area of Onsite Groundwater Contamination – 2012
- Figure C4-2 – Detected Area of Onsite Groundwater Contamination – 2005
- Figure C5 – Soil Boring and Monitoring Well Location Map
- Figure C6-1 – Groundwater Gradient Map – February 2, 2010
- Figure C6-2 – Groundwater Gradient Map – November 26, 2010
- Figure C6-3 – Groundwater Gradient Map – June 29, 2011
- Figure C6-4 – Groundwater Gradient Map – June 14, 2012
- Figure C7 – Groundwater COC Ingestion PCLE Zone Map
- Figure C8 – Cross Section showing depth to groundwater

The site is not located in the 100-year floodplain (Figure C2). The subject property is located within the Brays Bayou watershed (Figure C3).

APPENDIX D – PCLE ZONE DISCUSSION

Provide for each contaminant of concern within the designated groundwater:

- a. A description of the ingestion protective concentration level exceedence zone and the non-ingestion protective concentration level exceedence zone, including a specification of the horizontal area and the minimum and maximum depth below ground surface.*
- b. The level of contamination, the ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L units.*
- c. Its basic geochemical properties (e.g., whether the contaminant of concern migrates with groundwater, floats or is soluble in water).*

A) A comparison of the most recent groundwater sampling results (June 2012) to applicable Texas Risk Reduction Program (TRRP) Tier 1 residential groundwater Ingestion protective concentration levels (PCLs) ($^{GW}GW_{Ing}$ PCLs) indicates that the COCs in the groundwater plumes that exceed the applicable $^{GW}GW_{Ing}$ PCLs are trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), and vinyl chloride (VC) (Table D-1).

Comparison of the groundwater sampling results to applicable non-ingestion PCLs ($^{Air}GW_{Inh-V}$) indicates that the groundwater samples do not contain COC concentrations above the $^{Air}GW_{Inh-V}$ PCLs (Table D-1). Therefore, there are no non-ingestion PCLE Zones within the proposed MSD boundary.

The ingestion PCLE Zones for the groundwater COCs are confined vertically to the shallow groundwater zone encountered between approximately 14 feet and 55 feet bgs. Currently, there are three discrete groundwater COC plumes with PCLE Zones: two onsite plumes (one eastern plume consisting of 1,1-DCE and VC PCLE Zones and one western plume consisting of 1,1-DCE, VC, and TCE PCLE Zones) and one offsite plume beneath the Bintliff Drive ROW consisting of 1,1-DCE, VC, and TCE PCLE Zones (Figures C4 and C7). The eastern onsite groundwater plume is approximately 150 feet wide by 500 feet long, the western onsite groundwater plume is approximately 100 feet wide by 200 feet long, and the offsite groundwater plume is approximately 50 feet wide by 50 feet long. The affected groundwater in the groundwater plumes has been delineated horizontally and vertically. Further discussion of the groundwater plumes is provided in Appendix G. The concentrations of COCs in groundwater are included in Tables F5, F6, and F7 and the groundwater concentrations from the most recent groundwater sampling event are shown on Figure F1.

The benzene, ethylbenzene, and 1,2-dichloroethane (1,2-DCA) exceedences present in the offsite monitoring well MW-2 are not related to onsite sources. These VOCs are associated with the offsite Leaking Petroleum Storage Tank (LPST) facility (Former Target Tune & Lube) located adjacent to monitoring well MW-22. Additional information regarding the

LPST facility is presented in Appendix G. *Since the benzene, ethylbenzene, and 1,2-DCA present in the groundwater sample collected from monitoring well MW-22 are not related to the site and are not within the proposed MSD boundary, there is no further discussion of these constituents in this MSD Application, although, the concentration data is included on Table F5 and Figure F1 for informational purposes.*

- B)** The following table represents the groundwater PCL exceedances that were reported for the monitoring wells associated with the groundwater plumes from the most recent groundwater sampling event (June 2012):

TABLE D-1 – Groundwater PCL Exceedences

		VOCs (EPA 8260B)		
		1,1-Dichloroethene (1,1-DCE)	Trichloroethene (TCE)	Vinyl Chloride (VC)
Tier 1 ^{GW} GW _{Ing} Critical PCL (without MSD)		0.007	0.005	0.002
Tier 1 ^{Air} GW _{Inh-v} Critical PCL (with MSD)		1,700	120	3
Sample Location	Sample Date	Concentration (mg/L)		
MW-2	6/14/12	0.099	<0.0011	0.0053
MW-6A	6/14/12	0.017	<0.0011	<0.0010
MW-9	6/14/12	0.086	<0.0011	0.0032
MW-14	6/14/12	0.15	<0.0011	0.0045
MW-15	6/14/12	0.20	0.021	0.010
MW-11 (Offsite)	6/14/12	0.18	0.015	0.006
MW-18 (Offsite)	6/14/12	0.34	0.042	0.015

Note: Values in **Bold** exceed ^{GW}GW_{Ing} PCL (ingestion PCL)

- C)** The COCs detected in groundwater samples (TCE, cis-1,2-DCE, and 1,1-DCE) are chlorinated VOCs associated with historical onsite operations on the proposed MSD site.

Chlorinated VOCs are characterized by their high volatilities, high densities, low viscosities, low interfacial tension, low absolute solubilities, high relative solubilities, low partitioning to soil materials and low degradability. Chlorinated VOCs will dissolve in water at low concentrations but once the groundwater has reached the saturation limit for that compound, the chlorinated VOC will form a separate phase in equilibrium with the water. Because chlorinated VOCs have higher densities relative to water, the separate phase will "sink". These compounds are referred to as "dense non-aqueous phase liquids" (DNAPLs). In high concentrations, DNAPLs will be able to penetrate the water table and form "pools" on the top of less permeable layers. Historically, DNAPL has not been identified in any of the monitor wells installed on and around the site and is not expected to be present onsite given the relatively low concentration of chlorinated solvents detected in the groundwater samples collected from the monitoring wells. In addition, DNAPL was not observed in the very stiff clay lower confining layer present below the saturated zone in monitoring wells MW-2A, MW-17, MW-18, MW-19, and MW-20. Based on the field observations and laboratory results, it appears that the COCs are primarily dissolved in the shallow groundwater and would migrate with the groundwater flow.

Information on the geochemical properties of each COC is included on Table D2.

APPENDIX D

TABLE D2: GEOCHEMICAL PROPERTIES of COCs

Geochemical/Physical Properties		
Molecular Weight:	62.5	
Specific Gravity:	0.91	
Solubility in Water:	2,760 mg/l	

APPENDIX E – SUMMARY OF SOIL AND GROUNDWATER CONCENTRATION DATA

A table displaying the following information for each contaminant of concern, to the extent known:

- a. The maximum concentration for soil and groundwater, the Ingestion protective concentration level, and the non-ingestion protective concentration level, all expressed as mg/L.*
- b. The critical protective concentration level without the municipal setting designation, highlighting any exceedances.*

A) Tables E1 and E2 present the maximum concentrations for the COCs in the soil and groundwater and the Critical Ingestion and Non-Ingestion PCLs.

B) Tables E3-1, E3-2, E4-1, and E4-2 summarize the constituent concentrations in soil and Tables E5, E6, and E7 summarize the current and historical constituent concentrations in groundwater. The tables include the concentration level, the Critical residential Ingestion PCLs assuming no MSD is in place ($^{GW}Soil_{Ing}$ for soil and $^{GW}GW_{Ing}$ for groundwater) and the Critical residential Non-Ingestion PCLs assuming that an MSD is in place ($^{Tot}Soil_{Comb}$ and $^{Air}Soil_{Inh-V}$ for soil and $^{Air}GW_{Inh-V}$ for groundwater). Please note that the analytical data summary tables have been divided into subtables based on the COC such as VOCs, TPH, RCRA 8 metals, etc. Also, although the soil and groundwater COCs associated with the offsite LPST detected in offsite monitoring wells MW-21 and MW-22 are not included or discussed in this MSD application, the COC concentrations are included in Table E5 and on Figure E1 for informational purposes.

Groundwater

The TCE, 1,1-DCE, and VC concentrations in the shallow onsite groundwater exceed the applicable Critical Ingestion PCLs ($^{GW}GW_{Ing}$). The only metal detected in the groundwater was barium and the concentrations did not exceed the Critical Ingestion PCL ($^{GW}GW_{Ing}$). The COC Ingestion PCL exceedences in the shallow groundwater have been delineated vertically and horizontally to the applicable Ingestion PCLs. The results of the most recent groundwater sampling event are shown on Figure E1.

The COC concentrations in the groundwater do not exceed the applicable Critical Non-Ingestion PCLs

Soil

The 1,1-DCE and 1,2-dichlorethane (1,2-DCA) concentrations in the soil samples do not exceed the applicable Critical Ingestion PCLs ($^{GW}Soil_{Ing}$) or Non-Ingestion PCLs ($^{Tot}Soil_{Comb}$). TCE and VC were not detected in the soil samples above laboratory sample detection limits. Metals concentrations detected in the soil samples do not exceed the applicable Critical Non-Ingestion PCLs ($^{Tot}Soil_{Comb}$).

The following is a listing of tables included in Appendix E:

- Table E1 – Summary of COCs in Soil – Maximum Concentrations
- Table E2 – Summary of COCs in Groundwater – Maximum Concentrations

- Table E3-1 – Summary of COCs in Surface Soil – VOCs
- Table E3-2 – Summary of COCs in Surface Soil – TPH and Metals

- Table E4-1 – Summary of COCs in Subsurface Soil – VOCs
- Table E4-2 – Summary of COCs in Subsurface Soil – TPH and Metals

- Table E5 – Summary of COCs in Groundwater – Onsite & Offsite Wells - VOCs
- Table E6 – Summary of COCs in Groundwater – Metals
- Table E7 – Summary of COCs in Groundwater – Historical (1998 – 2004) - VOCs

NOTE: COC concentrations above the SDL are shown in **BOLD**
COC concentrations exceeding the Tier 1 Residential Protective
Concentration Level (PCL) are shown in **SHADED BOLD**.
* - Constituent associated with offsite LPST facility and not an onsite COC
J - concentration detected between the SDL and the method
quantitation limit (MQL) and is an estimated value.
< - not detected at concentrations above the indicated
sample detection limit (SDL)
MTBE - methyl tertiary butyl ether
TCEQ - Texas Commission on Environmental Quality
EPA - Environmental Protection Agency
NA - Analyte not analyzed

NOTE: COC concentrations above the SDL are shown in **BOLD**
COC concentrations exceeding the Tier 1 Residential Protective
Concentration Level (PCL) are shown in **SHADED BOLD**.
* - Constituent associated with offsite LPST facility and not an onsite COC
J - concentration detected between the SDL and the method
quantitation limit (MQL) and is an estimated value.
< - not detected at concentrations above the indicated
sample detection limit (SDL)
MTBE - methyl tertiary butyl ether
TCEQ - Texas Commission on Environmental Quality
EPA - Environmental Protection Agency
NA - Analyte not analyzed

APPENDIX F – OFFSITE PLUME

If the plume extends beyond the limits of property owners listed in this application, list the owners of the additional property beneath which the plume(s) extend(s), and a summary of interactions with those property owners about the plume(s) and this MSD application. Please Note: You are not required under this item to notify affected property owners, only to provide a summary of who affected property owners are, and if there have been any communications. "No contact" can be an acceptable answer.

The onsite VOC plumes do not extend beyond the limits of the designated MSD property (Figure C4).

The offsite VOC plume extends beneath the Bintliff Street right-of-way (ROW) (Figure C4). In the pre-application meeting, the City of Houston was made aware of the issue. No formal notification has been submitted.

The offsite VOC plume has been delineated to the TRRP ingestion PCLs; however, it is unknown whether the offsite COC exceedences in the groundwater extend beyond the Bintliff Drive ROW. During preparation of a Response Action Plan for the site in 2009, the TCEQ requested concurrence from the offsite property owner located at 6800 Bintliff Drive (on the west side of Bintliff Drive) to include this property in the Plume Management Zone (PMZ) and to install a monitoring well on this property. Terracon made several attempts to obtain concurrence from the offsite property owner; however, the offsite property owner rejected inclusion in the PMZ and denied permission to install a groundwater monitoring well. As an alternative, permission to install monitoring wells on the former Target property located west of the 6800 Bintliff Drive property was obtained. Monitoring wells MW-21 and MW-22 were installed on the former Target property in the entrance drive and immediately adjacent to the west side of the 6800 Bintliff Drive property (Figure E1). The COCs 1,1-DCE, TCE, and VC were not detected at concentrations above laboratory SDLs in the groundwater samples collected from these two monitoring wells. The petroleum hydrocarbon constituents and 1,2-DCA detected in monitoring MW-22 are associated with the former Target Tune & Lube facility and not considered further in this application.

APPENDIX G – PLUME STABILITY

A statement as to whether the plume of contamination is stable (i.e. no change), or contracting, and delineated, with the basis for that statement. Please include historical sampling data.

Currently, there are three discrete groundwater COC plumes with PCLE Zones: two onsite plumes and one offsite plume. The onsite eastern plume consists of 1,1-DCE and VC PCLE Zones and the onsite western plume consists of 1,1-DCE, VC, and TCE PCLE Zones). The offsite plume beneath the Bintliff Drive ROW consists of 1,1-DCE, VC, and TCE PCLE Zones (Figures C4 and C7). The known extent of the COC PCLE Zones in the offsite plume is limited to beneath Bintliff Drive and the associated City of Houston ROW since the adjacent property owner refused to access to allow further delineation of the offsite groundwater plume; however, groundwater samples from an offsite monitoring well (MW-22) installed immediately adjacent and downgradient to the offsite property was not found to contain COCs in the groundwater above laboratory sample detection limits (SDLs).

The two onsite plumes were formerly one plume containing 1,1-DCE, VC, and TCE exceedences as well as associated TCE daughter products. However, after removal of the potential onsite sources, the natural attenuation of TCE into its associated daughter/breakdown products over time resulted in an overall decrease in COC concentrations and the separation of the initial single onsite groundwater plume into two groundwater plumes. The relatively flat groundwater gradient also allowed natural attenuation to proceed at a rate relatively equal to the groundwater flow velocity which allowed the plumes to stabilize. The off-site plume beneath Bintliff Drive may be associated with a release from the historical site operations; however, the degradation pathway and concentrations of chlorinated solvents present in the off-site plume appear significantly different from the on-site plumes indicating possible comingling with similar COCs released from an unknown offsite source.

The groundwater plumes have been delineated horizontally and vertically to Ingestion PCLs. The onsite sources of contamination have not been present for approximately 15 years. Based on evaluation of groundwater sampling data collected during consecutive groundwater monitoring events for 14 years between 1998 and 2012, the overall groundwater plume is stable or decreasing and the COCs are undergoing natural attenuation (dechlorination and bioremediation). The attached concentration versus time graphs (Graphs G1 to G7) for representative monitoring wells show the trends for each COC with PCL exceedences in the groundwater plumes. Natural attenuation processes affect groundwater chemistry such that when concentrations of the parent COC (TCE) are decreasing or stable, there is often corresponding temporary concentration increases in associated daughter products (e.g., 1,1-DCE and VC) (Graphs G6 and G7). Seasonal groundwater level fluctuations or fluctuations due to severe weather conditions such as drought or tropical storms can also influence COC concentrations.

Petroleum hydrocarbons (benzene, toluene, ethylbenzene) and 1,2-DCA have been detected at concentrations above TRRP Ingestion PCLs in the groundwater samples collected from monitoring well MW-22 between May 2008 and June 2012. The petroleum hydrocarbons and 1,2-DCA are associated with the former Target Tune & Lube facility located approximately 80 feet west of Carmax's off-site monitoring well MW-22. *Since the petroleum hydrocarbons and 1,2-DCA detected in the offsite monitoring well MW-22 are not associated with an onsite source and these COCs are not included in the designated MSD boundary, there is no further discussion of these constituents in this MSD Application. However, the analytical results for the offsite groundwater investigation are included on Figure F1 and Table F5 for informational purposes. The offsite petroleum hydrocarbon and 1,2-DCA concentrations in the groundwater also do not exceed non-ingestion PCLs..*

In summary, site characteristics which support a MSD for the site include the following:

1. Groundwater sampling data obtained over the past 14 years have provided sufficient concentration trend and plume stability data to confirm and demonstrate that the COC PCLE Zones are stable and/or reducing in size;
2. The groundwater plumes have been vertically and horizontally defined to TCEQ ingestion PCLs;
3. The overall relatively low concentrations of the COCs in the groundwater have not exceeded TCEQ non-ingestion PCLs for the past 14 years;
4. Soil PCLE zones have not been identified at the site;
5. A relatively flat hydraulic gradient which has allowed additional time for natural attenuation to occur and decreased the potential for migration beyond the PCLE zones;
6. Removal of the potential onsite sources for the COCs in the groundwater approximately 15 years ago;
7. No potential receptors are present within or near the PCLE zones which are or are potentially threatened by exposure to the affected groundwater.
8. The site and surrounding properties have access to a municipal water system (City of Houston). The water well search identified the closest public supply well approximately 0.25 mile crossgradient of the designated property. However, this well is screened and produces from greater than 800 feet below ground surface and is separated from the impacted shallow groundwater at the site by an aquitard (impermeable clay layer) hundreds of feet thick.

9. In 2009, a Response Action Plan (RAP) with a Plume Management Zone (PMZ) and one year of additional groundwater monitoring was approved for the site by the TCEQ, pending offsite property owner concurrence. The development of the PMZ included calculating attenuation action levels (AALs) for the COCs in monitoring wells designated as attenuation monitoring points (AMPs). The COC concentrations in the AMPs do not exceed the AALs (Table G1).

:POE - point of exposure
VOCs - volatile organic compounds
EPA - United States Environmental Protection Agency
MQL - method quantitation limit
< - not detected at concentrations above the indicated laboratory SDL
J - estimated concentration detected between the SDL and the MQL

APPENDIX H – CONTAMINATION EXCEEDENCE DISCUSSION (Without MSD)

A statement as to whether contamination on and off the designated property without a Municipal Setting Designation will exceed a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.

Without an MSD, the most recent groundwater data collected in June 2012 indicate three COCs will exceed the Tier 1 residential assessment level for the groundwater ingestion pathway ($^{GW}GW_{Ing}$). The three COCs are TCE, 1,1-DCE, and VC. The groundwater PCLE Zone for each respective COC is presented in Appendix C. Tabulated groundwater data are presented in Appendix E.

APPENDIX I – FUTURE CONTAMINATION EXCEEDENCE DISCUSSION (With MSD)

A statement as to whether contamination on and off the designated property with a Municipal Setting Designation will exceed a residential assessment level as defined in the Texas Risk Reduction Program or analogous residential level set by EPA, if known, and the basis for that statement.

With an MSD, COCs in the groundwater will not exceed the residential assessment level for the groundwater ingestion pathway.

With an MSD, the groundwater PCLs for direct human ingestion of groundwater ($^{GW}GW_{Ing}$) would be eliminated for the purposes of assessment and cleanup. By eliminating the ingestion pathway, the applicable non-ingestion pathway for the groundwater would be the air inhalation exposure pathway ($^{Air}GW_{Inh-V}$). No detections of the COCs above the $^{Air}GW_{Inh-V}$ pathway PCLs for groundwater have been reported from data collected at the site from 1998 to the present. Appendix D tabulates the maximum detected values from sampling data collected during the most recent groundwater sampling event and compares them to the $^{Air}GW_{Inh-V}$ PCLs. Therefore, by applying an MSD to the property, COCs in groundwater will not exceed the applicable residential assessment levels.

APPENDIX J – ORIGIN OF CONTAMINATION

Identification of the points of origin of the contamination and the persons responsible for the contamination, to the extent known.

The former Halliburton Geophysical Services facility onsite operations between 1961 and 1994 is considered the historical source of onsite contamination (Figure J1). The historical sources of contamination are discussed in the sections below.

Figure B1 shows the current land use of the site and surrounding area, Figure J1 shows the historical land use, and Figure C5 shows the onsite and offsite sources of impact. Figure C8 presents a cross section of the site stratigraphy along the groundwater flow direction. Figure E1 in Appendix E presents a COC groundwater concentration map and Tables E5, E6, and E7 in Appendix E present a tabulated summary of the COC groundwater concentration results.

Onsite Origin of Contamination

The site was constructed in 1961 by Ray Geophysical (a geophysical cable manufacturer) and was used for the purposes of manufacturing and assembling geophysical tools and equipment. Halliburton Geophysical Services (Halliburton) acquired the property in 1988 from Ray Geophysical and performed similar onsite operations. The facility contained 98,000 square feet of buildings (five buildings) situated on 206,000 square feet of land. Buildings A and B were used primarily as office space while building C was used as a cable assembly and warehouse area. The affected property area, Buildings D and E, housed a paint area, plating shop and vehicle maintenance shop. Several metal storage sheds (hazardous waste, general storage, petroleum oils) were also located near Buildings D and E. Buildings D and E had floor drains that discharged into one central sump before emptying into the sanitary sewer. Reportedly, onsite sanitary sewer lines trended east toward Hornwood Street. Figure C5 shows the locations of the former Halliburton buildings.

Halliburton closed operations around 1994 and the facility was unoccupied from 1994 to 1996 when the property was acquired by CarMax Superstores, Inc. (Carmax) for development as a dealership for the retail sale of pre-owned cars. The waste storage area and contents were removed in 1994 when the Halliburton facility closed. The building and sumps were removed in 1996 when the property was acquired by CarMax and construction of the Carmax building began.

Wastes known to have been generated at the site when Halliburton was in operation included paint, paint related wastes, toluene, chromic and other acids, petroleum dispersants, solvents, and waste oil. Several historic USTs were located onsite near Buildings D and E as well as hazardous waste and used/new oil storage areas. The hazardous waste area had proper secondary containment and no spills were identified according to the reports reviewed.

The potential onsite source areas identified and investigated between 1996 and 2004 at the former Halliburton facility included the following:

- Steam cleaning area (wash bay), truck shop, paint shop, and plating shop floor drains/sumps located in former Buildings D and E. The floor drains associated with the plating works were identified as a potential area of concern based on the lack of information regarding the metal plating operation while the site was owned by Halliburton and lack of information on the activities of the property's owners from 1965 to 1988.
- A storage shed and hazardous waste storage area were reportedly located south of Building E. The storage shed was used to store equipment and miscellaneous supplies. No chemicals were stored in the storage shed.
- Waste/wash water sump which was an 18-inch square concrete vault approximately 18-inches deep. This sump was removed during the UST removals in 1991.
- Chromic acid spill in the waste oil storage area. This spill was investigated in 1994 for presence of hexavalent chromium. The impacted soils were excavated and disposed offsite. No hexavalent chromium was found above laboratory detection limits in the excavation confirmation samples.
- A total of five 1,000-gallon gasoline USTs and two 4,000-gallon diesel fuel USTs are located north-northeast of Buildings E. A former waste oil tank was located in the area of MW-2 and MW-2A. These tanks were removed in 1991 by Halliburton and impacted soil excavated and disposed offsite. No release from the USTs was confirmed during the removal activities.

The site entered the Voluntary Cleanup Program (VCP) in 1997 after completion of a VCP Application and Agreement and submission of a Site Investigation Report (SIR) and Conceptual Exposure Assessment Model (CEAM) report.

Offsite Sources

Former Target Store #T-0016 Tune & Lube

During site investigation activities, an offsite source for the groundwater COCs in downgradient offsite monitoring wells was identified: the former Target Tune & Lube auto service center associated with the former Target Store #T-0016 located at 7051 Southwest Freeway. The former Target Tune & Lube auto service center operated between 1969 and approximately 2006 and had a total of five gasoline, oil, and waste oil USTs, two dispenser islands, and several below-ground hydraulic lifts present. The USTs and hydraulic lifts were removed from the ground in 1981 and 2000, respectively. A release from the former UST systems was discovered

in 2001 and the site was designated a Leaking Petroleum Storage Tank (LPST) site (LPST ID No. 115555). Between 2002 and 2007, several site investigations and groundwater monitoring events were performed at the Target Tune & Lube facility. Petroleum hydrocarbons, (primarily benzene) were detected in the groundwater at concentrations which exceed PST Action Levels but were below the levels protective of construction workers. During the last groundwater sampling event in October 2007, benzene concentrations in the groundwater ranged from 2.35 mg/l to 17.0 mg/l.

VOCs were only analyzed in the groundwater samples collected from Target monitoring wells during two sampling events in 2007. The chlorinated solvent 1,2-dichloroethane (1,2-DCA) was only detected in the groundwater sample from one monitoring well,; however, the laboratory sample detection limits for the other groundwater samples were above the TRRP groundwater ingestion PCL.

The site entered the VCP (VCP ID No. 2072) and was closed under PST Regulations since the concentrations of petroleum hydrocarbons were below the PST Target Levels protective of construction workers. A VCP Certificate of Completion was issued for the Target LPST site in February 2010.

The former Target Tune & Lube facility was located approximately 80 feet west of Carmax's off-site monitoring well MW-22. Petroleum hydrocarbons and 1,2-DCA were consistently detected in the groundwater samples collected from monitoring well MW-22 between May 2008 and June 2012. *Since the petroleum hydrocarbons and 1,2-DCA detected in the off-site monitoring well MW-22 are not associated with an on-site source and these COCs are not included in the designated MSD site, there is no further discussion of these constituents in this MSD Application. However, for informational purposes, the location of the former Target Tune & Lube facility and associated monitoring wells as well as the concentrations of petroleum hydrocarbons and 1,2-DCA detected in the groundwater sample collected from offsite monitoring well MW-22 during the last groundwater sampling event are shown on Figure E1. In addition, Table E5 summarizes the laboratory analytical findings for the on-site and off-site monitoring wells associated with the designated MSD site.*

Site Investigations

The primary objectives of the site assessments were to investigate the soil and groundwater at the site, identify the COCs, and define the soil and groundwater COC PCLE Zones as part of the process to obtain closure under TRRP Texas Administration Code (TAC) 30 §350 through the TCEQ VCP.

Site investigations were performed onsite in the identified areas of concern and onsite and offsite groundwater plumes delineated between August 1994 and May 2008. Groundwater sampling events were performed between June 1998 through June 2012. The site investigations consisted of advancing numerous soil borings and installing groundwater monitoring wells onsite and offsite in the Bintliff Drive COH ROW and on the former Target property. A total of 16 shallow soil borings and 23 deep soil borings were advanced on the site and on offsite properties. The deep soil borings were converted to permanent monitoring wells (Figure C5).

The COCs initially selected for analyses during the preliminary site investigation were based on process knowledge of the historical onsite operations. The COCs selected for soil and groundwater analyses during additional site investigations were based on the findings of the initial assessment findings. The soil samples and groundwater samples collected from the soil borings and monitoring wells were analyzed for total petroleum hydrocarbons (TPH) using Environmental Protection Agency (EPA) Method 418.1, volatile organic compounds (VOCs) using EPA Method 8260, and/or the 8-listed Resource Conservation and Recovery Act (RCRA) metals using EPA Method 6020//6010/7471/7470. Figure E1 in Appendix E presents the most recent COC groundwater concentration map and Tables E3-1, E3-2, E4-1, E4-2, E5 and E6 in Appendix E present tabulated summaries of the soil and groundwater analytical results. Table E7 presents a summary of historical groundwater analytical results (1998 – 2004).

Area Stratigraphy

The predominant site stratigraphy is a silty clay to clayey silt from the surface to approximately 15 to 20 feet which is underlain by a stiff, dry sandy clay to approximately 27 to 30 feet. Beneath the sandy clay layer is a saturated silty sand to sand zone (the shallow GWBU) that varies in thickness between 20 and 35 feet. A stiff low permeability clay is present below the shallow GWBU. A perched or discontinuous groundwater bearing zone was encountered during drilling in the eastern portion of the site between 14 and 20 feet bgs. The shallow GWBU was encountered between 26 and 30 feet bgs in the central and western portions of the site. Figure C8 presents a cross sections of the site stratigraphy.

Groundwater Flow Direction

Based on the water level measurements, the shallow groundwater flow is consistently to the west-southwest at an average gradient of approximately 0.003 foot per foot (ft/ft). Variations in groundwater levels is primarily a function of rainfall events. In 2008 and between 2010 and 2011, the groundwater levels dropped between one and two feet due to the extreme drought conditions in the area. Groundwater gradient maps from the last two years are included in Appendix C.

Investigation Findings

- Based on concentration trends, three groundwater plumes were identified: two onsite plumes (eastern and western) and an off-site plume beneath the Bintliff Drive ROW. The COCs identified in the groundwater plumes that exceed the applicable groundwater ingestion ($^{GW}GW_{Ing}$) PCLs are trichloroethene (TCE), 1,1-dichloroethene (1,1-DCE), and vinyl chloride (VC). The COCs that exceed $^{GW}GW_{Ing}$ PCLs in the plumes consist of 1,1-DCE and VC in the onsite eastern plume; 1,1-DCE, TCE, and VC in the onsite western plume; and, 1,1-DCE, TCE, and VC in the offsite plume.
- The primary source for the COCs (TCE, 1,1-DCE, and VC) in the groundwater plumes appears to be historical onsite Halliburton operations between 1961 and 1994. The onsite historical sources were removed approximately 15 years ago. Further discussion of the onsite sources is provided in Appendix J.
- TPH and metals were not detected in the soil and shallow groundwater at concentrations exceeding TCEQ residential ingestion PCLs. VOCs were not detected in the soil at concentrations exceeding TCEQ residential ingestion PCLs.
- The affected groundwater in the plumes has been delineated horizontally and vertically to TCEQ residential ingestion PCLs (Figure C4-1). The PCLE Zones for the groundwater COCs are vertically confined to the shallow groundwater zone encountered between approximately 14 feet and 55 feet bgs.
- The COC concentrations in the shallow groundwater have not exceeded TCEQ non-ingestion PCLs during 14 years of groundwater monitoring.
- The groundwater plumes have been monitored for 14 years and are stable or decreasing in size and concentration. The COC concentrations are decreasing through dechloronization (Graphs G1 to G7 in Appendix G).

APPENDIX K- REGULATORY ACTIONS

Environmental regulatory actions, litigation, and plume identification.

- a. A description of any environmental regulatory actions that have been taken within the past five years in connection with the designated property, to the extent known.*
- b. A description of any litigation that has taken place within the past five years in connection with the designated property, to the extent known.*
- c. A statement as to whether there are any other remediation activities by the applicant, or any other party or agency, which are not listed in the application.*
- d. A statement as to which contamination plume and groundwater zone the applicant is including in the MSD.*

A, B, C) Not applicable. No environmental regulatory actions, litigation, or remediation actions have been taken within the past five years in connection with the designated property.

D) The groundwater contamination plume included in the MSD consists of chlorinated VOCs (TCE, 1,1-DCE, and VC). The affected groundwater is the first groundwater-bearing unit encountered between approximately 14 feet and 55 feet bgs.

APPENDIX L – EXISTING STATE OR EPA REGISTRATIONS, PERMITS, OR IDENTIFICATIONS

A listing of all existing state or EPA registrations, permits, and identification numbers that applies to the designated property.

The following is a listing of all existing state or EPA registrations, permits, and identification numbers that apply to the designated property:

- TCEQ Air Permit No. 46134
- TCEQ PST Facility ID No. 1540
- TCEQ Voluntary Cleanup Program (VCP) No. 525
- Texas State Customer Number – CN600366355 (Carmax Auto Superstores, Inc.)
- Texas State Registration Number – RN101097962 (Carmax 7111)

APPENDIX M – ENROLLMENT IN STATE OR FEDERAL CLEANUP PROGRAMS

Provide evidence that the designated property has been admitted to the Texas Voluntary Cleanup Program or similar state or federal programs (the program application number is sufficient evidence), and a description of the status of the designated property in the program. Also, include the state or federal cleanup project manager's name.

The site was accepted into the TCEQ Voluntary Cleanup Program (VCP) in May 1997 and assigned VCP No. 525. The status of the designated property in the VCP is active and the closure process ongoing, pending receipt of a MSD from the City of Houston and the TCEQ. The TCEQ VCP Project Manager assigned to the site is Jacquee N. Rodriguez.

APPENDIX N – TCEQ SUBMITTALS

A summary of any environmental site assessment reports filed with TCEQ regarding any site investigations or response actions that are planned, ongoing or completed related to the designated property.

An Amended Affected Property Assessment Report (APAR) will be submitted to the TCEQ after the site has been approved for an MSD from the City of Houston and the TCEQ.

A brief listing of environmental site assessment reports filed with the TCEQ regarding site investigations or response actions that are planned, ongoing, or completed is provided below.

1. Texas Water Commission, March 4, 1992, "Underground Storage Tank closure at the Halliburton Geophysical Services Facility", Texas Water Commission.
2. Delta Environmental Consultants, Inc. (Delta), September 20, 1994, "Phase I Environmental Assessment Report", Houston, Texas.
3. Law Engineering and Environmental Services, Inc. (LAW), May 30, 1996, "Phase I Environmental Site Assessment (ESA) and Limited Asbestos Survey", Houston, Texas.
4. LAW, August 1996, "Report of Phase II Site Assessment".
5. LAW, October 1996, "Report of Phase IIA Site Assessment".
6. Delta, December 13, 1996, "Ground-water Investigation Report".
7. Delta, July 4, 1997, "Quarterly Ground-water Monitoring Report".
8. Delta, July 14, 1997, "Site Investigation Report"
9. May 1997 – site assigned Voluntary Cleanup Program (VCP) No. 525 under the 30 TAC Chapter 335 Risk Reduction Rules. The 1996 "Phase I ESA Report" and 1996 "Report of Phase II Site Assessment" were included in the package submitted to the TCEQ VCP
10. LAW, October 1997, "Site Investigation Report (SIR)/Conceptual Exposure Assessment Model (CEAM) Report".
11. LAW, January 1998, "Addendum to SIR/CEAM Report".

26. Terracon, August 2012, "Groundwater Sampling Summary Letter"

APPENDIX O – PUBLIC DRINKING WATER SUPPLY

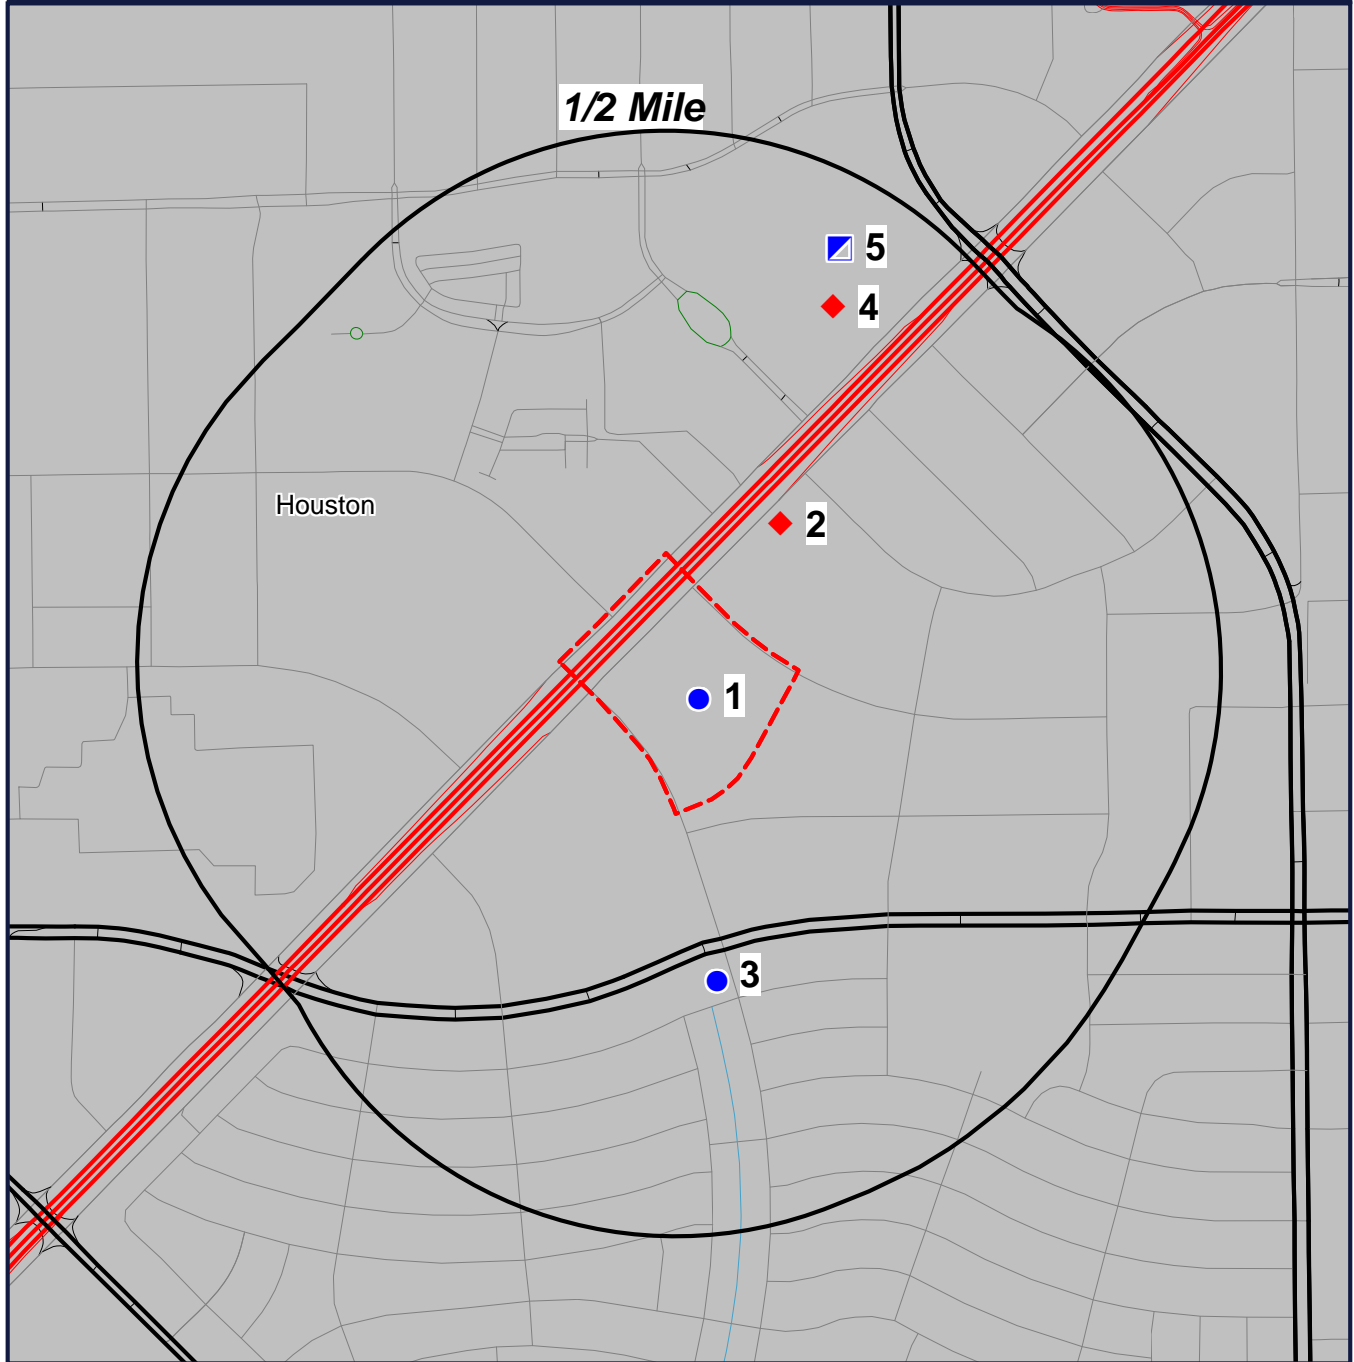

A statement as to whether any public drinking water supply system exists that satisfies the requirements of Chapter 341 of the Texas Health and Safety Code and that supplies or is capable of supplying drinking water to the designated property and property within one-half mile of the designated property and the identity of each supply system.

The site is located within the boundaries of the City of Houston (COH). Terracon researched the COH on-line GIS-interactive utilities map within a 0.5-mile radius of the site and performed a field survey reconnaissance within 500-feet of the site to determine the availability of a Public Water System (PWS). The City of Houston GIS-interactive utilities map search indicated that a municipal PWS is available at the site and surrounding residences and commercial businesses.

Field observations of water meters and a water supply pumping station observed within 1,200 feet of the site during the field survey of the area surrounding the site supported the availability of the COH municipal PWS. COH public supply wells #65-20-602, 65-20-608, 65-20-626 are located at the pumping station located south of the site across Bellaire Boulevard, approximately 1,200 feet south of the designated site boundary. The site formerly had two onsite water wells (State ID 65-20-6B and 65-20-3D) that were used as a source of industrial water on the site. The two onsite wells were plugged in 1997. A third well (State ID 60-21-4) is shown onsite; however, the mapped location of this well is incorrect.

A map showing the water wells present within one-half mile of the designated site is attached.

APPENDIX P – PRIVATE WATER WELL OWNERS WITHIN 5 MILE RADIUS OF PROPERTY

The name and address of each owner or operator of a water well registered or permitted by the state or the Houston-Galveston Subsidence District that is located within five miles of the boundary of the designated property, along with a map showing the location of each well and, to the extent known, a notation of whether each well is used for potable water. Well logs must be included in the electronic copy of the application, but should not be included in the hard copies. (An accompanying electronic excel file with mailing information should be included with your application) .

The names and address of identified water well owners within a 5-mile radius of the site and a notation, to the extent known, of the well use are shown on the attached table. A map showing the location of each well is also attached. Copies of the well logs are included in the electronic PDF file of this application and as a separate file on the CD submitted with this application.

APPENDIX Q – RETAIL PUBLIC UTILITIES OPERATING A GROUNDWATER SUPPLY WELL WITHIN 5 MILE RADIUS OF PROPERTY

The name and address of each retail public utility, as defined in section 13.002 of the Texas Water Code that owns or operates a groundwater water supply well within five miles of the boundary of the designated property.

Other than the City of Houston, the following Retail Public Utilities operate at least one groundwater supply well within five miles of the subject property:

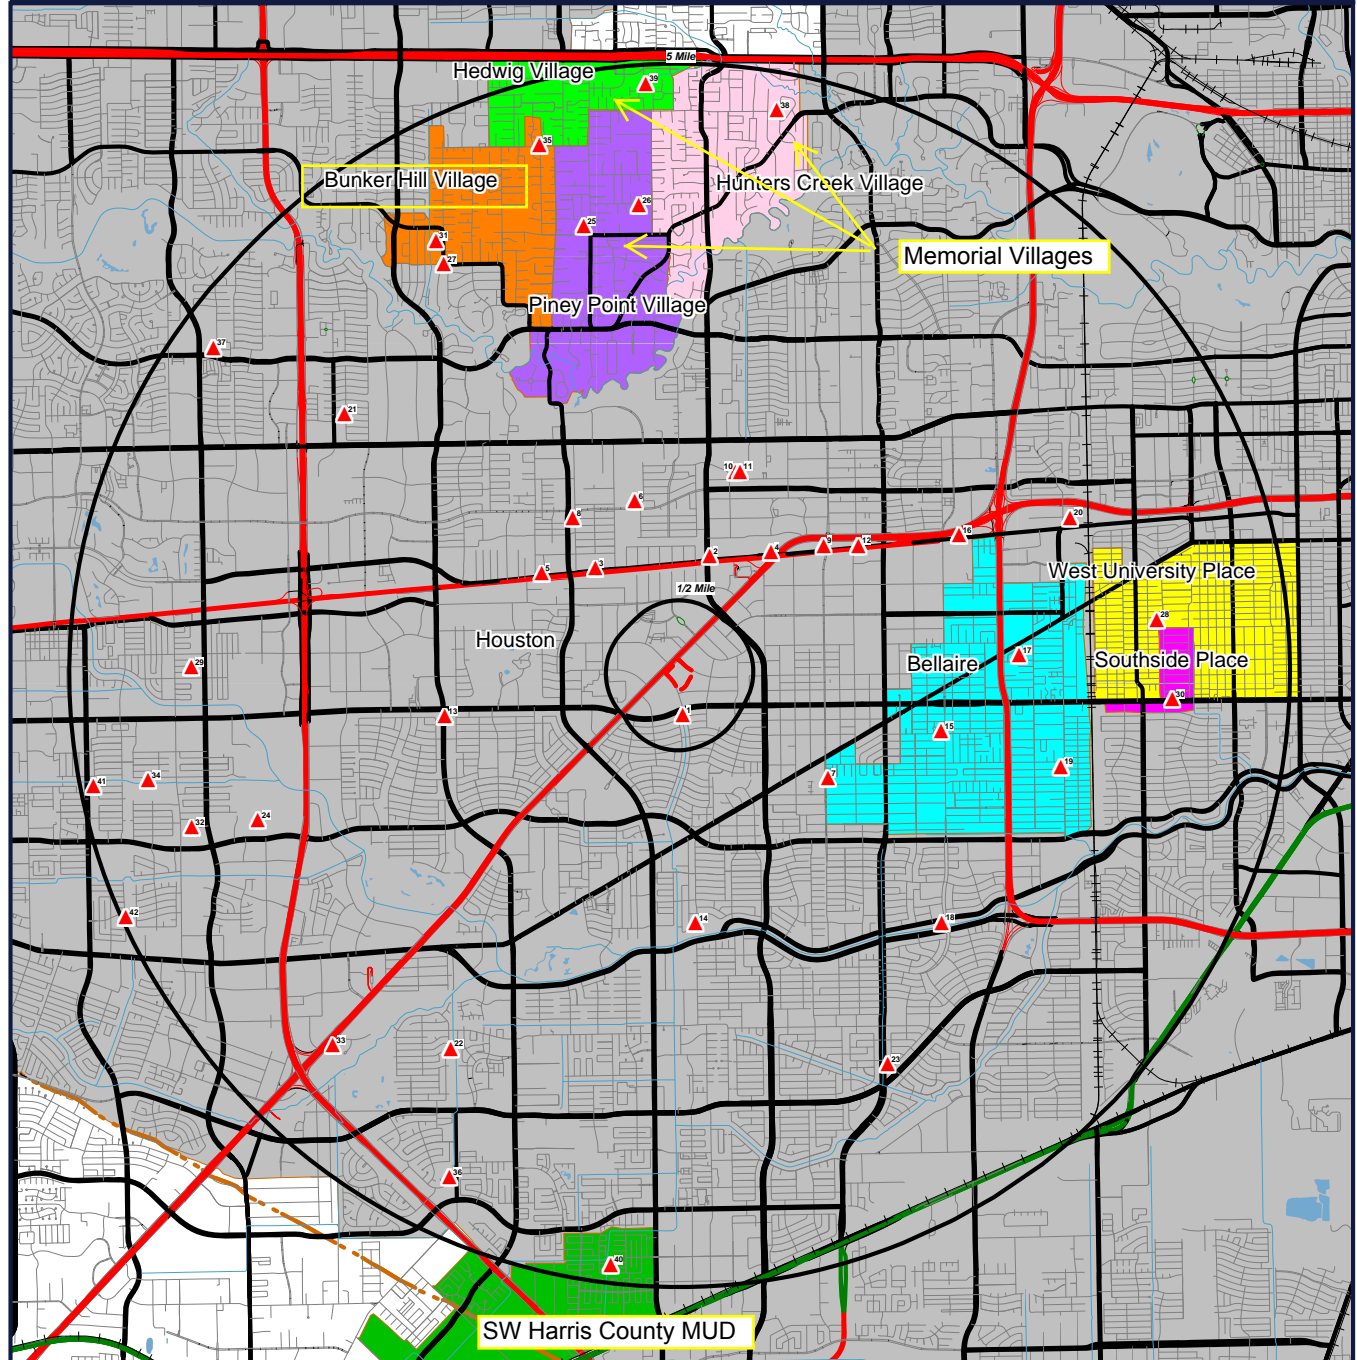

- Southwest Harris County MUD #1
- City of Bellaire
- City of Southside Place
- City of West University Place
- City of Bunker Hill
- Memorial Villages Water Authority (Includes Hedwig Village, Piney Point Village, and Hunters Creek Village)

A table listing the Retail Public Utilities names and addresses is shown below and a list of the RPUs and water wells is attached.

APPENDIX R – MUNICIPALITIES WITHIN ONE HALF MILE OF PROPERTY

A listing of each municipality, other than the City of Houston, with a corporate limit within one-half mile of the boundary of the designated property.

There are no municipalities, other than the City of Houston, with a corporate limit within one-half mile of the designated site boundary.

APPENDIX S - MUNICIPALITIES OPERATING A GROUNDWATER SUPPLY WELL WITHIN 5 MILE RADIUS OF PROPERTY

A listing of each municipality, other than the City of Houston, that owns or operates a groundwater supply well within five miles of the boundary of the designated property.

There are no municipalities, other than the City of Houston, within five miles of the site that operate at least one groundwater supply well.

APPENDIX T- REAL PROPERTY OWNERS WITHIN 2,500 FEET OF PROPERTY

*A listing of owners of real property within 2,500 feet of the boundary of the designated property as indicated by the most recent appraisal district records. Please Note: This requirement may include real property outside the City of Houston. Be sure to include **ALL** properties in the 2,500 ft. boundary. (An accompanying electronic excel file with mailing information should be included with your application.)*

Refer to the attached table for a listing of real property owners within 2,500 feet of the designated property boundary. An electronic excel file with mailing information is included on the CD submitted with this application.

APPENDIX U - STATEMENT REGARDING COMPLETENESS OF INFORMATION AND POTENTIAL FOR OFF-SITE IMPACT

Form U-2012-01 signed and sealed by a licensed professional engineer or licensed professional geoscientist authorized to practice in the State of Texas with expertise in environmental remediation. (Form U-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage.)

Form U-012-01 signed and sealed by a licensed professional geoscientist authorized to practice in the State of Texas with expertise in environmental remediation is attached to this appendix.

Appendix U – Completeness of Information and On-Site and Off-Site Impact(s)

To the best of my knowledge and belief, based upon a review of all public and private records and other information sources available to me in the exercise of due diligence, the opinions stated and conclusions made in this application are supported by such information, and the technical and scientific information submitted with the application is true, accurate and complete. Based on such review, the contaminants of concern from sources on the designated property or migrating from or through the designated property more likely than not do exceed or do not exceed a non-ingestion protective concentration level on property beyond the boundaries of the designated property.

Mary Helen Niemann

(Name)

Senior Project Geologist

(Title)

Terracon Consultants, Inc.

(Firm)

Signature: 

Date: 9/20/13

Professional Seal

APPENDIX V – DETERMINATION OF OFFSITE NON-INGESTION PCL EXCEEDENCES

If the licensed professional engineer or licensed professional geoscientist determines that contaminants of concern from sources on the designated property are migrating from or through the designated property more likely than not do exceed a non-ingestion protective concentration level on property beyond the boundary of the designated property, then the applicant must:

- a. Specify the name and address of the owner of each property.*
- b. Send a copy of the application to the owner of the property with the notice of the public meeting.*
- c. Provide documentation that the designated property has been included in a state or federal program that requires that the entire non-ingestion protective concentration level exceedance zone be addressed to the satisfaction of the agency administering the program, along with documentation of the estimated time period in which it is to be addressed. An example of such a program is the Texas Voluntary Cleanup Program (section 361.501 of the Texas Health and Safety Code, as may be amended from time to time).*
- d. Provide documentation upon completion of the state or federal program showing that the non-ingestion protective concentration level exceedences have been addressed to the satisfaction of the agency administering the program.*

Not Applicable.

The contaminants of concern from sources on the designated property do not exceed a Non-Ingestion PCL level beyond the boundary of the designated property.

APPENDIX W - STATEMENT REGARDING ACCURACY OF INFORMATION

Form W-2012-01 certified/signed by the applicant and any authorized representatives of the applicant(s) listed in the application. (Form W-2012-01 is attached to the end of this application and can also be found at www.houstonmsd.org under the "Forms" section on the homepage.)

Form W-012-01 certified/signed by the applicant is attached to this appendix.

Appendix W – Accuracy of Information

I certify under penalty of law that this application and all attachments were prepared under my direction or supervision in a manner designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the persons responsible for gathering and evaluating the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of a fine and imprisonment for knowing violation.
